- Gutter Cleaning
- Exterior Window Washing
- Deck and Fence Cleaning
- Roof Cleaning
- Concrete Cleaning

Softwashing vs Pressure Washing

	Pro's	Con's
Soft Washing	<ul style="list-style-type: none"> • Longevity, property stays clean for a longer period of time because all active growth is killed and rinsed cleaned. • Safer because we are able to spray 30-40 feet from the ground. Not needing to use ladders. • More efficient. Larger projects can be done in a shorter amount of time. Causing less impact in multi family communities. • High volume water instead of high pressure. Allowing the rinsing process to be safer and quicker. 	<ul style="list-style-type: none"> • Untrained field technicians can kill all vegetation if proper procedures are not taken. • Smell of bleach
Pressure Washing	<ul style="list-style-type: none"> • Old school way of cleaning. • Instant gratification by blasting away dirt and debris. • Since power washing is done with such force, it is recommended that it only be used on hard, exterior surfaces such as patios, sidewalks,, and driveways.. 	<ul style="list-style-type: none"> • Does NOT truly kill active growth. • What else do you clean with just water? Clothes? No, you use detergents. Car? No, again detergents. Body? Nope, soap. • High Pressure can damage the surface and push water behind siding. • Etch siding, concrete, blast out mortar, cause window seals to break.
